Projects

Full-stack project   2023

- Design and Implementation of API: Developed RESTful API using Node.js and Express to provide efficient and scalable services.

- Connection with MongoDB: Established and managed the connection with the MongoDB database.

- User Interface (UI) Development: Designed and developed user interfaces.

- API Consumption: Integrated backend APIs into the frontend to ensure efficient communication between layers and a seamless user experience.

The perfect plant for you   2023

- Created a Vanilla JavaScript version to understand core concepts and implement basic functionality, them migrated the project to React to improve code organization and enhance the user interface. Integrated with a plant database API to fetch and display plant recommendations based on user inputs.

La Libertad E-Commerce Website   2023

- Client Engagement and Collaboration: Conducted meetings with clients before initiating the development phase and maintained ongoing communication for feedback and progress updates.

- Design Lead: I supported as the main assigned individual in the implementation and customization of the Starfont theme on the WooCommerce platform.

- Product Import from Excel: Assisted in migrating the product database using Excel spreadsheets, optimizing the process, and ensuring the integrity of the information.

- TiloPay Payment Gateway Integration: I support in research to implemented the TiloPay payment gateway to facilitate secure and efficient transactions.

- Team Collaboration: Worked closely with classmates to ensure cohesion between the design, functionality, and overall objectives.
